Prepared for

Executive Leadership Team

Reading Cinemas Australia

Date

June 2026

Executive Summary

Reading Cinemas customers often visit the website or mobile app with a general intention to watch a movie, but without a clear decision on what to watch, where to watch it or which session best suits them. The current digital journey can require users to manually browse movie listings, change cinema locations, compare session times and search across different pages for information about services such as Gold Lounge, rewards, gift cards, accessibility, group bookings and events. This creates friction for customers who want a faster and more guided cinema planning experience.

This proposal recommends the introduction of Reelio, an AI-powered cinema concierge for Reading Cinemas Australia. Reelio would sit within the Reading Cinemas website and mobile app as an intelligent discovery and support layer, allowing customers to ask natural-language questions about movies, sessions, locations and cinema services. Instead of replacing the existing booking system, Reelio would guide users toward suitable movie and session options and then redirect them to the official Reading Cinemas booking flow.

The value of Reelio is that it can help customers move from uncertainty to action faster. It can reduce browsing friction, improve visibility for movies and sessions, support stronger booking redirection, promote services such as Gold Lounge, rewards, gift cards and group bookings, and reduce repetitive customer service enquiries. Reelio can also provide Reading Cinemas with useful anonymised insight into customer intent, including popular locations, genres, session times, service questions and booking barriers.

Overall, Reelio gives Reading Cinemas an opportunity to modernise the digital cinema journey while keeping its existing booking infrastructure in place. By starting with a controlled website-based MVP, Reading Cinemas can test the product, validate customer value and expand it over time into a broader digital assistant across the website and mobile app. The recommended next step is to review the Reelio prototype, confirm the MVP scope, identify the required data sources and test Reelio in a controlled website environment.

1. Project Objective

The objective of Reelio is to improve the digital movie discovery and booking experience for Reading Cinemas customers by introducing an AI-powered cinema concierge within the Reading Cinemas website and mobile app.

Reelio is designed to help customers find suitable movies, session times, cinema locations and cinema-related information through a simple conversational experience. Instead of requiring users to manually search across different movie pages, locations and session listings, Reelio allows customers to describe what they are looking for in natural language and receive relevant recommendations.

The project aims to reduce friction in the customer journey, support faster decision-making and guide users more effectively toward completing a booking. Reelio also provides an opportunity for Reading Cinemas to promote key offerings such as Gold Lounge, rewards, gift cards, events, accessibility services and group bookings through a more personalised and interactive digital experience.

The goal is not to replace the existing Reading Cinemas booking system, but to create an intelligent discovery layer that supports customers before they enter the booking flow. By doing this, Reelio can help increase customer engagement, improve session visibility and create a more modern and helpful online cinema experience.

2. The Current Problem

The current cinema booking journey can be time-consuming for customers, especially when they are unsure what they want to watch or which session is most suitable for them. Many users visit a cinema website with only a general intention, such as wanting to watch a movie tonight, planning a date night, finding something suitable for family, or looking for a convenient session near their location.

However, the existing digital experience often requires customers to make several decisions manually. They may need to browse movie listings, change cinema locations, compare session times, check movie details, understand pricing or formats, and then move into the booking flow. This creates friction for users who want a faster and more guided experience.

The problem is not only about finding a movie. Customers may also have questions about Reading Cinemas' services, such as Gold Lounge, rewards, gift cards, accessibility, group bookings, baby-friendly sessions or special events. These details may exist across the website, but they are not always easy to find quickly when the customer is already in decision-making mode.

Key Customer and Business Issues

For casual moviegoers, the main challenge is not always the lack of options. The challenge is having too many options without enough guidance. Reelio is designed to solve this by helping users move from uncertainty to decision-making in a faster and more personalised way.

3. Proposed Solution

The proposed solution is to introduce Reelio, an AI-powered cinema concierge that helps Reading Cinemas customers find movies, sessions, locations and cinema information through a simple conversational interface.

Reelio would sit within the Reading Cinemas website and mobile app as a guided discovery tool. Instead of requiring users to manually search through multiple pages, users can type what they are looking for in natural language. Reelio can then interpret the request and provide relevant movie and session suggestions based on the customer's location, preferred time, genre, mood, occasion or cinema experience.

How Reelio Works

Reelio would also support general cinema enquiries. Customers could ask about Gold Lounge, rewards, gift cards, accessibility, group bookings, baby-friendly sessions, special events and other Reading Cinemas services. This allows Reelio to act as both a movie recommendation assistant and a customer support tool.

The solution does not require Reading Cinemas to rebuild its full booking system. The existing booking flow can remain in place, while Reelio improves the earlier stages of the customer journey: discovery, decision-making and session selection.

By adding Reelio, Reading Cinemas can create a more helpful and personalised digital experience. The customer can move from uncertainty to action faster, while Reading Cinemas gains a new way to increase engagement, promote sessions and guide more users toward completed bookings.

4. Product Positioning

Reelio should be positioned as Reading Cinemas' AI cinema concierge. It should not be presented as a basic chatbot or a simple search feature. Instead, Reelio should be presented as a guided movie discovery and customer support experience that helps customers make better decisions before entering the booking flow.

“Not sure what to watch? Ask Reelio.”

From a customer perspective, Reelio feels like a helpful cinema assistant. It can understand natural requests, suggest relevant movies, explain cinema services and guide users toward the right booking pathway.

From a business perspective, Reelio acts as a digital engagement layer for Reading Cinemas. It can increase visibility for movies, sessions, Gold Lounge, rewards, gift cards, events and group bookings by introducing these options through conversation rather than relying only on static website navigation.

Overall, this positioning allows Reelio to support both customer experience and commercial outcomes. It gives Reading Cinemas a modern digital feature that helps customers move from uncertainty to action while keeping the existing booking system as the final transaction point.

5. Target Users

Reelio is designed for Reading Cinemas customers who want a faster, easier and more guided way to choose movies, find sessions and access cinema-related information. The primary target users are everyday moviegoers who may visit the Reading Cinemas website or app without a fixed decision already made.

These customers may know they want to watch a movie, but they may still be deciding what to watch, where to watch it, what time works best or which cinema experience suits the occasion.

Target User Segments

User Segment	Need or Situation	How Reelio Helps
Casual Moviegoers	Want to go to the cinema but are unsure what movie to choose.	Recommends suitable movies based on mood, genre, location, timing or general preference.
Couples and Date Night Users	Need a movie that suits a date night, weekend plan or premium experience.	Suggests suitable movies, session times, locations and Gold Lounge options where available.
Families and Parents	Need family-friendly options, child-suitable movies, daytime sessions or baby-friendly information.	Helps identify suitable movies, convenient sessions and relevant family-related cinema information.
Groups and Event Planners	Planning birthdays, social outings, school events, private screenings or corporate bookings.	Guides users toward group booking options, cinema hire information and enquiry pathways.
Frequent Customers and Loyalty Members	Want information about rewards, offers, Gold Lounge, gift cards or special events.	Helps users discover benefits, services and offers that may be missed during normal browsing.
New or Infrequent Customers	Are unfamiliar with Reading Cinemas locations, formats, services or booking processes.	Acts as a simple entry point by answering common questions and explaining available options.
Internal Reading Cinemas Teams	Need better visibility into what customers are searching for before booking.	Provides insights into popular locations, genres, session times, customer questions and booking friction points.

6. Scope of the Product

The scope of Reelio is to create an AI-powered cinema concierge that supports customers during the movie discovery and pre-booking stage of the Reading Cinemas digital journey.

Reelio is not intended to replace the existing Reading Cinemas website, mobile app or booking system. Instead, it is designed to work as an intelligent support layer that helps users find the right movie, session, location or cinema information before they continue into the official booking flow.

Product Scope Overview

In Scope for Version 1	Out of Scope for Version 1	Future Scope
Natural-language movie discovery	Direct payment processing	Loyalty account integration
Session and location guidance	Seat selection	Personalised recommendations
Booking page redirection	Customer account management	Saved favourite cinemas
Customer service support	Refund handling	Voice search
Guided recommendations	Complex complaint resolution	Multilingual support
Website-first integration	Loyalty-based personalisation	Group planning
Basic mobile-ready design	Making final decisions for users	Push notifications and campaign promotion

In Scope

The first version of Reelio should focus on helping customers discover movies, find suitable sessions and access relevant cinema information. Users should be able to search by genre, mood, location, date, time, occasion or general preference. Reelio should also help users identify which Reading Cinemas locations are showing a selected movie and what session times are available. Once a user selects a movie, cinema and session, Reelio should redirect them to the existing Reading Cinemas booking pathway. The first version should also support common customer questions about Gold Lounge, rewards, gift cards, accessibility, group bookings, special events and general cinema information.

Out of Scope for Version 1

Reelio should not process ticket payments, manage seat selection, handle refunds, resolve complex complaints or manage customer accounts in the first version. These functions should remain within the existing Reading Cinemas systems and support channels. Reelio should also not make final decisions on behalf of users. Its role is to guide, recommend and redirect customers to the correct Reading Cinemas booking or information pathway.

Future Scope

Future versions of Reelio could include loyalty account integration, personalised movie recommendations, saved preferences, favourite cinemas, voice search, multilingual support, group planning, push notifications and campaign-based movie promotion. By keeping the initial scope focused, Reading Cinemas can test Reelio as a practical

customer experience feature before expanding it into a larger AI-powered digital assistant across the website and mobile app.

7. Key Features

Reelio should be designed as a focused AI cinema concierge that supports movie discovery, session search, customer questions and booking guidance. The key features should directly support the customer journey before the user enters the final Reading Cinemas booking flow.

Key Feature Overview

Feature	What Reelio Does	Customer/Business Value
Natural-Language Movie Search	Allows users to search using everyday language, such as mood, genre, location, time or occasion.	Makes movie discovery easier for customers who do not know exactly what they want to watch.
Mood, Genre and Occasion-Based Recommendations	Recommends movies based on requests such as scary, funny, family-friendly, date night or weekend plan.	Helps users move from uncertainty to decision-making faster.
Session and Location Discovery	Shows where a movie is playing and what sessions are available across relevant Reading Cinemas locations.	Reduces the need for users to manually compare locations and session pages.
Booking Redirection	Sends users to the correct Reading Cinemas booking page once they select a movie, cinema and session.	Keeps the existing booking system in place while improving the pre-booking journey.
Customer Service Support	Answers common questions about Gold Lounge, rewards, gift cards, group bookings, accessibility, baby-friendly sessions, events and cinema facilities.	Reduces friction and helps customers access information without searching across multiple pages.
Quick Prompt Suggestions	Displays example prompts to help users understand what they can ask Reelio.	Makes the assistant easier to use, especially for first-time users.
Follow-Up Questions	Asks simple clarifying questions when a	Creates a more guided and personalised experience.

	customer request is too broad.	
Service and Offer Promotion	Introduces relevant Reading Cinemas services such as Gold Lounge, gift cards, rewards, events and group bookings during the conversation.	Creates opportunities to increase awareness of premium experiences and services.
Website and Mobile App Accessibility	Designed to work across the Reading Cinemas website first, with future extension into the mobile app.	Allows customers to access Reelio across key digital touchpoints.
Conversation Insights	Captures anonymised insights about common questions, searched locations, preferred genres, session times and booking friction points.	Helps Reading Cinemas understand customer intent and improve marketing, programming and digital experience decisions.

Together, these features allow Reelio to act as both a movie discovery assistant and a customer support tool. The product helps customers find suitable movies and sessions faster, while giving Reading Cinemas a new way to guide users toward booking and promote key cinema services.

8. User Journey

The Reelio user journey is designed to support customers from the moment they begin exploring movie options through to the point where they are ready to book. The experience should feel simple, conversational and helpful, especially for users who are unsure what they want to watch.

Rather than requiring customers to manually browse movies, change cinema locations and compare session times, Reelio guides them through a clearer journey: discovering the assistant, asking in natural language, clarifying preferences, receiving recommendations, selecting a session and continuing to the existing Reading Cinemas booking flow.

The journey begins when a customer visits the Reading Cinemas website or app and sees Reelio as a support option. The customer can then type a natural request, such as wanting a scary movie near Epping after 8pm, a date night option near Geelong, or a family movie on the weekend.

If the request is too broad, Reelio can ask simple follow-up questions about location, genre, session time or preferred cinema experience. Once the request is clear, Reelio presents suitable movie, session and location options with enough information for the customer to compare and decide.

After the customer selects a movie, cinema and session, Reelio redirects them to the official Reading Cinemas booking page. The existing booking system continues to handle seat selection, ticket pricing, payment and confirmation.

The journey also creates useful anonymised insight for Reading Cinemas. Common searches, popular locations, preferred genres, high-demand session times and repeated customer questions can help internal teams improve marketing, programming, customer experience and digital optimisation.

Overall, the Reelio journey helps move customers from uncertainty to action. It gives customers a simpler way to decide what to watch and gives Reading Cinemas a stronger opportunity to convert browsing users into paying customers.

9. Business Value for Reading Cinemas

Reelio can create business value for Reading Cinemas by improving the way customers discover movies, compare sessions and move toward booking. The product supports both customer experience and commercial outcomes by reducing friction in the digital journey and helping users make decisions faster.

Business Value Overview

Business Value	How Reelio Supports It	Expected Impact
Improved Booking Conversion	Guides undecided customers toward suitable movies, sessions and booking pages.	More browsing users can move into the booking flow with confidence.
Reduced Customer Friction	Allows customers to search using natural language instead of manually comparing multiple pages.	The movie discovery and session selection process becomes faster and easier.
Better Movie and Session Visibility	Recommends relevant movies, locations and session times based on customer intent.	Under-discovered movies, sessions and cinema experiences can receive more visibility.
Premium Service Promotion	Introduces Gold Lounge, rewards, gift cards, group bookings, events and cinema hire at relevant moments.	Reading Cinemas can increase awareness of higher-value services and experiences.
Customer Support Efficiency	Answers common questions about accessibility, rewards, gift cards, baby-friendly sessions, Gold Lounge and general cinema information.	Repetitive enquiries can be reduced, allowing support teams to focus on more complex issues.
Customer Insight	Captures anonymised trends around popular locations, genres, session times, service questions and booking barriers.	Internal teams can use customer intent data to improve marketing, programming, operations and digital experience decisions.
Competitive Differentiation	Provides a more guided and intelligent cinema discovery experience than standard filters and listing pages.	Reading Cinemas can present itself as a more modern, helpful and customer-focused cinema brand.

Overall Business Impact

The overall business value of Reelio is its ability to connect customer intent with booking action. By helping customers decide what to watch, where to watch it and when to attend, Reelio can improve engagement, increase session discovery, support premium service promotion and guide more users toward completed bookings.

10. Implementation Approach

Reelio should be implemented through a phased approach so Reading Cinemas can test the product, measure value and expand functionality over time. The recommended approach is to begin with a focused website-based MVP, then gradually extend Reelio into the mobile app and more advanced customer experience features.

The implementation does not require Reading Cinemas to replace its existing website, mobile app or booking platform. Reelio should be built as an additional discovery and support layer that connects customers to the right movie, cinema location, session or information page.

Recommended Implementation Model

The recommended implementation model is to start small with a controlled website MVP, connect Reelio to official Reading Cinemas data sources, keep booking and payment inside the existing booking system, test with real customer scenarios and measure engagement before expanding further.

This approach allows Reading Cinemas to trial Reelio with lower risk while still creating a clear pathway for future growth across the website, mobile app and future personalised customer experiences.

11. Data Requirements

For Reelio to provide accurate and useful recommendations, it must be connected to reliable Reading Cinemas data sources. The quality of Reelio's responses will depend on the accuracy, structure and freshness of the data it can access.

Reelio should use approved Reading Cinemas data across movies, sessions, cinema locations, booking links, service information, promotions and customer interaction insights.

Data Requirements Overview

Data Category	Required Data	Purpose
Movie Data	Movie title, synopsis, genre, classification, runtime, language, release status, poster image, trailer link and movie tags.	Helps Reelio understand each movie and recommend suitable options based on mood, genre, occasion or audience type.
Session Data	Cinema location, movie title, session date, session time, format, screen type, Gold Lounge availability, booking link and session status.	Allows Reelio to recommend accurate and available movie sessions.
Cinema Location Data	Cinema name, address, suburb, state, nearby suburbs, available cinema experiences, parking, public transport, accessibility and contact details.	Supports location-based requests and helps users find suitable Reading Cinemas locations.
Booking and Redirection Data	Movie booking links, session-specific booking links, cinema location pages, Gold Lounge booking links, group booking enquiry links, gift card links and rewards sign-up links.	Enables Reelio to redirect customers to the correct booking or information pathway.
Cinema Service Information	Gold Lounge, rewards, gift cards, Terrific Tuesday, group bookings, private cinema hire, accessibility, baby-friendly sessions, events, food and beverage, policies and FAQs.	Allows Reelio to answer common customer service questions accurately.
Promotional and Campaign Data	Current promotions, upcoming events, limited-time offers, premium experience campaigns, school holiday	Helps Reelio promote relevant services, offers and cinema experiences at the right moment.

	programming, special screenings and local cinema campaigns.	
Customer Interaction Data	Common questions, searched movies, searched locations, popular genres, high-demand session times, unanswered questions, booking redirection activity and conversation completion rates.	Gives Reading Cinemas anonymised insight into customer intent, demand and friction points.

Data Freshness and Quality

Because movie sessions and cinema availability change frequently, session times, booking links, offers and availability should be updated as close to real time as possible. Static information such as Gold Lounge details, rewards information, accessibility details and FAQs should still be reviewed regularly to ensure accuracy.

The data used by Reelio should be accurate, current, structured, consistent, approved by Reading Cinemas and linked to official booking or information pages. Poor-quality data could lead to incorrect recommendations, broken booking links or customer confusion.

Overall, Reelio needs structured movie, session, location, service and booking data that is accurate, regularly updated and aligned with the existing Reading Cinemas digital ecosystem.

12. Privacy, Security and AI Considerations

Because Reelio is an AI-powered customer-facing assistant, privacy, security and responsible AI controls must be considered from the beginning of implementation. The product should provide helpful customer support and movie recommendations while protecting customer information, maintaining brand trust and ensuring responses are accurate and appropriate.

Privacy, Security and AI Control Overview

Consideration	Requirement	Purpose
Customer Privacy	Reelio should only collect information needed to support the customer's request, such as preferred	Protects customer privacy and avoids unnecessary personal data collection.

	location, movie genre, date or time.	
Data Minimisation	Reelio should not ask for sensitive or irrelevant customer information.	Keeps the assistant focused on movie discovery, session search and cinema information.
Secure Data Handling	Any connection to Reading Cinemas systems should use secure data transfer, controlled access and protected interaction logs.	Reduces the risk of data exposure or unauthorised access.
Approved Data Sources	Reelio should answer using approved Reading Cinemas data, especially for sessions, booking links, offers, Gold Lounge and customer service information.	Ensures responses are accurate and consistent with official information.
AI Response Control	Reelio should avoid unverified claims, incorrect pricing or policy information, offensive responses and answers outside the Reading Cinemas context.	Protects brand trust and keeps the assistant controlled.
Human Escalation	Reelio should redirect complex issues such as refunds, complaints, private events or accessibility-specific concerns to human support.	Ensures customers receive proper support when AI assistance is not enough.
Transparency	Customers should understand that they are interacting with an AI-powered cinema concierge.	Builds trust and makes the experience clear.
Monitoring and Review	Reading Cinemas should regularly review unanswered questions, incorrect responses, customer feedback and booking redirection performance.	Helps improve Reelio over time.
Responsible Use of Insights	Conversation insights should be anonymised where possible and used	Supports business insight while respecting customer privacy.

	to understand broad customer behaviour, not intrusive individual tracking.	
--	--	--

Overall Consideration

The success of Reelio depends not only on its ability to recommend movies, but also on its ability to operate safely, accurately and responsibly. By applying strong privacy, security and AI controls, Reading Cinemas can introduce Reelio as a trusted digital assistant that improves the customer journey while protecting customer confidence and brand reputation.

13. Stakeholders and Ownership

The successful implementation of Reelio would require involvement from multiple Reading Cinemas stakeholders across digital, marketing, operations, customer service, technology and governance. Because Reelio would sit within the customer journey and influence how users discover movies, sessions and cinema services, clear ownership is important from the beginning.

Stakeholder Responsibility Overview

Stakeholder Group	Role in Reelio	Key Responsibilities
Executive Leadership	Provides strategic approval and business direction.	Approves product direction, investment, business priorities and expected outcomes.
Digital Product or Customer Experience Team	Primary owner of the Reelio customer experience.	Defines the user journey, manages website placement, reviews interface design and monitors engagement.
Technology and Development Team	Owens technical implementation and system integration.	Connects Reelio to approved data sources, manages API integrations, maintains booking links and applies security controls.
Marketing Team	Supports promotional messaging and campaign use cases.	Promotes Gold Lounge, rewards, gift cards, events and selected movies through Reelio where relevant.

Programming and Content Team	Ensures movie and session recommendations are accurate and relevant.	Reviews movie information, supports genre and mood tagging, checks session visibility and identifies priority titles.
Customer Experience and Support Team	Maintains customer service accuracy.	Reviews FAQs, service responses, support pathways and escalation processes for complex customer issues.
Cinema Operations Teams	Provides location-specific information.	Maintains cinema facilities, local events, accessibility details, parking information and operational updates.
Legal, Privacy and Compliance Team	Reviews governance, privacy and AI usage requirements.	Reviews privacy requirements, AI disclosures, data retention, terms and conditions and customer-facing claims.

Recommended Product Ownership Model

Reelio should have one primary product owner responsible for decision-making, prioritisation and ongoing improvement.

Ownership Area	Recommended Owner
Primary Product Owner	Digital Product or Customer Experience Team
Technical Owner	Technology and Development Team
Content Owners	Marketing, Programming and Customer Support Teams
Governance Support	Legal, Privacy and Compliance Teams
Operational Contributors	Cinema Location and Operations Teams

Reelio should be managed as an ongoing digital product, not a one-time chatbot installation. It will require regular content updates, data checks, performance monitoring and customer experience improvements.

Clear ownership will help Reading Cinemas ensure that Reelio remains accurate, useful, safe and aligned with business goals after launch.

14. Risks and Assumptions

Like any AI-powered customer-facing product, Reelio has risks and assumptions that need to be considered before implementation. These do not prevent the product from being developed, but they should be managed carefully to ensure the assistant is accurate, useful and aligned with Reading Cinemas' customer experience standards.

Key Risks

Risk	Potential Impact	Mitigation
Inaccurate movie or session information	Customers may receive outdated session times, unavailable movies or incorrect location details.	Connect Reelio to official Reading Cinemas data sources and refresh session information regularly.
Incorrect or unverified AI responses	Reelio may provide confident but incorrect answers about pricing, offers, refunds, accessibility or policies.	Use approved content sources and guide users to official pages when information is uncertain.
Generic or low-value responses	Customers may not see value in using Reelio if responses feel vague or disconnected from real sessions.	Use structured movie, session and cinema data with clear response templates.
Over-reliance on Reelio	Some users may prefer traditional browsing, filters or movie pages.	Position Reelio as an additional support option, not a replacement for existing navigation.
Booking redirection errors	Incorrect or broken links could reduce customer trust and create booking frustration.	Pull booking links from official systems and test them regularly.
Privacy and data handling concerns	Customer interaction data could create privacy risk if not handled responsibly.	Minimise personal data collection and anonymise analytics where possible.
Brand and tone misalignment	Poorly worded or inappropriate responses could affect Reading Cinemas' brand trust.	Apply approved tone-of-voice guidelines, response controls and regular quality review.
Technical integration complexity	Data sources may not be easily accessible or structured for the first version.	Start with a controlled MVP and expand integration gradually.

Key Assumptions

Assumption	Meaning
Reading Cinemas has access to structured movie and session data	Reelio will need movie, session, cinema location and booking link data to provide useful recommendations.
The existing booking system will remain in place	Reelio will support discovery and booking redirection, while seat selection, pricing, payment and confirmation remain in the current booking system.
Customers will benefit from guided discovery	The proposal assumes many users would value a conversational assistant when they are unsure what to watch.
Reading Cinemas will provide approved content	Reelio will require approved information for Gold Lounge, rewards, gift cards, accessibility, group bookings, offers and events.
Reelio will start as a controlled MVP	The first version should focus on movie discovery, session guidance, service questions and booking redirection before advanced personalisation.
Human support will still be available	Reelio will not replace customer support teams and should redirect complex issues to the correct support pathway.
Customer data will be used responsibly	Any interaction data should be used for product improvement, customer insight and digital optimisation, not intrusive tracking.

Overall Risk Position

The risks associated with Reelio are manageable if the product is implemented in a controlled and phased way. The most important controls are accurate data integration, approved response sources, privacy safeguards, booking link validation and regular quality monitoring.

With these controls in place, Reelio can be introduced as a low-risk customer experience enhancement that supports movie discovery, customer support and booking conversion while protecting Reading Cinemas' brand trust.

15. Success Metrics

The success of Reelio should be measured by how effectively it improves customer engagement, supports movie discovery, reduces friction and guides users toward the

booking journey. Reelio should not only be evaluated by how many people open it, but by whether it helps customers make decisions faster and take useful next steps.

Success Metrics Overview

Metric Category	What to Measure	Why It Matters
Customer Engagement	Number of Reelio conversations started, returning users, average conversation length, quick prompt usage and most common user prompts.	Shows whether customers are using Reelio and finding value in the experience.
Booking Redirection	Number of users redirected to booking pages, click-through rate, percentage of conversations leading to booking redirection and drop-off before booking.	Measures whether Reelio is helping users move from discovery to booking action.
Conversion and Revenue Support	Change in booking conversion rate, bookings from Reelio users, Gold Lounge enquiries, group booking enquiries and gift card or rewards-related traffic.	Shows whether Reelio is supporting commercial outcomes beyond basic customer support.
Customer Experience	Customer satisfaction rating, response feedback, users finding suitable movies or sessions, reduction in repeated searches and abandoned browsing journeys.	Measures whether Reelio is making the experience easier and more helpful.
Customer Support	Number of service-related questions answered, reduction in repetitive enquiries, unresolved questions and users redirected to support or enquiry pages.	Shows whether Reelio is reducing customer support pressure while still guiding users correctly.
AI Quality and Accuracy	Response accuracy, incorrect answers, low-confidence responses, unanswered questions, booking link errors and internal quality review score.	Protects customer trust and ensures Reelio gives reliable information.

Operational Insight	Most searched locations, requested genres, high-demand session times, popular customer occasions and repeated customer pain points.	Helps Reading Cinemas understand customer demand and improve marketing, programming and digital decisions.
---------------------	---	--

Suggested MVP Success Targets

For the first version of Reelio, Reading Cinemas could use simple success targets to evaluate whether the product should be expanded.

Initial success targets may include:

MVP Target	Purpose
Steady increase in Reelio usage after launch	Shows customer adoption.
Measurable percentage of Reelio conversations leading to booking redirection	Shows movement from discovery to booking.
Positive customer feedback on helpfulness	Shows customer value.
Reduction in common service-related enquiries	Shows support efficiency.
Low rate of incorrect or unresolved responses	Shows AI quality and reliability.
Clear evidence that users are discovering movies, sessions or services through Reelio	Shows the product is supporting discovery.

Overall Success Measure

The overall success of Reelio should be measured by whether it helps customers move from uncertainty to action. If Reelio can help users decide what to watch, find a suitable session, understand Reading Cinemas services and continue toward booking with less effort, then the product can be considered successful.

The strongest measure of success is the combination of improved customer experience, increased booking redirection, better service visibility and useful customer insight for Reading Cinemas.

16. MVP and Future Roadmap

Reelio should be developed in stages so Reading Cinemas can test the product with lower risk, measure customer value and expand the experience over time. The recommended approach is to begin with a focused minimum viable product that supports the most important customer needs first, then introduce more advanced features after the product has been validated.

Minimum Viable Product

The first version of Reelio should focus on the core customer journey: helping users decide what to watch, find a suitable session and continue to the existing Reading Cinemas booking flow.

MVP Feature	Purpose
Natural-language movie search	Allows customers to ask for movie suggestions using simple everyday language.
Session and location guidance	Helps customers find where a movie is playing and what session times are available.
Booking redirection	Guides customers to the correct Reading Cinemas booking page without replacing the existing booking system.
Common cinema service questions	Answers questions about Gold Lounge, rewards, gift cards, accessibility, group bookings and general cinema information.
Quick prompt suggestions	Helps users start the conversation quickly by showing example prompts.
Basic conversation insights	Captures anonymised usage trends to support product improvement and business decisions.

The MVP should first be launched in a controlled way, such as on the Reading Cinemas website for selected locations or one state. This would allow Reading Cinemas to test customer usage, response quality, booking redirection and business value before a wider rollout.

Future Roadmap

Overall Roadmap Direction

The roadmap should keep Reelio focused on customer value first. The first version should solve a clear problem: helping users choose a movie and find a session more easily.

Once this is proven, Reelio can grow into a broader AI-powered cinema assistant that supports personalisation, loyalty, group planning, customer service, promotions and deeper engagement across the Reading Cinemas digital ecosystem.

17. Conclusion

Reelio presents Reading Cinemas with an opportunity to improve the way customers discover movies, find sessions and move toward booking. The product addresses a common challenge in the cinema journey: customers often want to watch a movie, but may not know what to watch, where it is playing, which session suits them or which cinema experience is most appropriate.

By introducing Reelio as an AI-powered cinema concierge, Reading Cinemas can create a more guided, personalised and helpful digital experience. Customers would be able to ask for recommendations in natural language, receive relevant movie and session options, ask common service questions and continue into the existing booking flow with greater confidence.

The value of Reelio is that it does not require Reading Cinemas to replace its current website, mobile app or booking system. Instead, it can be added as an intelligent discovery layer that supports customers before they enter the transaction stage. This makes the product practical to implement in phases, beginning with a focused MVP and expanding over time.

For customers, Reelio can reduce confusion, save time and make the cinema planning experience easier. For Reading Cinemas, it can support stronger booking redirection,

better session visibility, increased awareness of premium services, reduced repetitive customer enquiries and valuable insight into customer intent.

The recommended next step is to review the Reelio prototype, confirm the MVP scope, identify the required Reading Cinemas data sources and test the product in a controlled website environment.

Overall, Reelio is designed to help Reading Cinemas turn customer interest into customer action. It gives users a simpler way to decide what to watch and gives Reading Cinemas a modern digital feature that supports customer experience, engagement and commercial growth.
